SUBJECT INDEX

(Volume 24)

adsorption isotherm 469
allose 389
archean geochemistry 1
auroral plasma 1
autocatalysis 57, 384

base, kinetics stacking 479
base pairing 389
[3,2d][1,4]-benzodiazepin-6(5H)-one 63
biosphere 435
10-bromo-11b-(o-fluorophenyl)-2,3,7,11b-tetrahydrooxazolo-acid/alkaline solution mixing 19

catalysis 479
catalysts 389
chain elongation 479
cherts 451
climate stabilizer 435
coevolution 425
copper 469
cyanide 1
cyanohydrin polymerization 1
cyclohexanethiol 43
cyclohexanone 43

deoxribonucleotides 469
dicyclohexyldisulfide 43
dissipative structure 389

enantioselective 63
entropy 435
EQ3NR/EQ6 19
equilibration 389
evolutionary relationships 425

ferrocyanide 1
formaldehyde 1
formose reaction 57

genetic code 425
geometrical complementarity 495
glycolaldehyde phosphate 389
glycolamide 1
glycolonitrile 1
growth pattern 451

Hadean Ocean 19
hexopyranosyl 389
homo DNA 389
Hoogstein 389
hydrothermal systems 19

inorganic precipitation 451
iron sulfide 19, 43

kinetic barriers 389

ligation 479

microfossils, putative 451
molecular evolution 495
nucleotide binding 469

off-ridge springs 19
oligonucleotides 389
organic catalyst 57
oxazole, 4-amno-2-hydroxymethyl 1

p-RNA 389
phylogeny 425
Precambrian 451
propagation 389
protein-dependent-RNA splicing 495
pyrite 43

recognition specificity 495
redox system 43
reduction 43
reflexive catalysis 57
reverse-Hoogstein 389
ribose 389
RNA world 479

self-organization 435
selfassembly 389
selfsustainment 389
sequences 425
silicate-carbonate 435
spontaneous resolution 63
structural compatibility 495

t-RNA 425
template-directed 479
tree topology 425

water/rock reaction 19
Watson-Crick 389
zinc 469
